

LED LIGHTING and CONTROLS for STAIRWELLS

**UP TO 85%
ENERGY SAVINGS**

Xeelum's LED Stairwell Fixtures are built to provide years of superior, high-efficiency, maintenance-free operation in commercial and residential building applications. These rugged, durable luminaires are specifically designed for use in stairwells where the space is often unoccupied for long periods of time. They reduce energy usage by up to 85% by automatically providing full on light levels only when the space is occupied and return to power saving dim levels when the space is unoccupied. An intelligent wireless RF system links multiple fixtures and, together with built-in occupancy sensors, automatically tracks occupancy so that the lights are at full brightness at the floors above, below and directly at the occupied location, irrespective of the occupant's direction of travel. These fixtures function equally well in hallways, bathrooms, or any area that is frequently occupied. Optional built in battery backup operates for 90 minutes minimum.

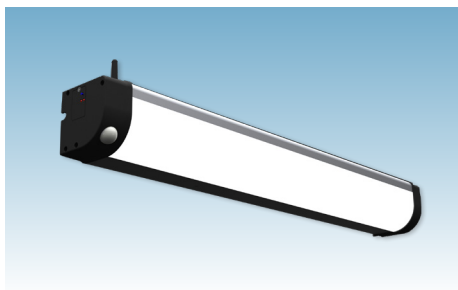

All Fixtures are Enabled for Optional Xeelum Xi-Fi® Wireless Lighting Control System

With Xi-Fi technology, a powerful, highly reliable and easy to commission wireless lighting control system is available as an option, providing capability to reduce energy usage as much as 85%. An intuitive user interface enables quick and easy installation using the simple to operate App installed on a PC or tablet. Xi-Fi enables you to commission all the fixtures without having to make physical adjustments at the fixtures. Xi-Fi control also incorporates PIR motion sensing.

Artemis Stairwell Fixture – 4- foot Ceiling Mount

The Athena Stairwell fixture is designed to operate at 29 watts input power and 3,000 lumens illumination when the space is occupied. When the space is unoccupied the fixtures DIM to a power level of 7 watts and 500 lumens. Color temperatures of 4,000° K and 5,000° are available. Fail safe in accordance with NFPA 101 for new and existing stairwells when installed properly. Complies with NYC LOCAL LAW 47 & ASHRAE 90.1-2010

Artemis Stairwell Fixture – 4- foot Ceiling Mount

The Artemis (XS) is a 4' ceiling mounted stairwell fixture. The fixture is designed to operate at 41 watts input power and 4,200 lumens illumination, however a field setting is provided to reduce these fully ON levels to 32 watts and 3,200 lumens for applications where a lower light level and greater energy savings is desired. When the space is unoccupied the fixtures DIM to a power level of 12 watts and 1,200 lumens. Color temperatures of 4,000° K and 5,000° are available. Fail safe in accordance with NFPA 101 for new and existing stairwells when installed properly. Complies with NYC LOCAL LAW 47 & ASHRAE 90.1-2010
